

Data-Figure Compatibility Matrix (Final Numbering)

Legacy	Action	Final successor	Boundary / reason
Fig7	appendix retained	AppF3	Literature context remains useful if provenance is retained; moved out of main data sequence.
Fig17	regenerated	Fig3, Fig4	Final numbered pack uses Fig3 for the runtime/accuracy boundary and Fig4 for the Pareto companion.
Fig19	mechanism retained	AppF4	Mechanism ablation is restored as appendix context, with accuracy-preservation wording blocked.
Fig20	regenerated	Fig7	Retained only as contextual CPU/MPS/FULLER comparison, not benchmark equivalence.
AppF3 / AppF4	regenerated	Fig6	Declared-grid timing support with trace-backed flow-buffer fields; no universal scaling or silicon measurement claim.
AppF7	regenerated	Fig5	Retained as bounded sensitivity context and blocked from positive accuracy-preservation wording.
Fig10	mechanism retained	AppF5	Energy component decomposition is restored as appendix mechanism context.
Fig8 / Fig18	mechanism retained	AppF6	DET k-sweep and net-gain evidence are restored as appendix mechanism context.
Fig11-Fig16, AppF1 / AppF2 / AppF5 / AppF6 / AppF8	retired		Not restored in this pass because it is either out of boundary, redundant with current schematics, or too likely to imply unsupported current accuracy claims.

Final successors use Fig3/Fig4 runtime-Pareto, Fig5 bounded sensitivity, Fig6 declared-grid timing, and Fig7 device context; Fig9-Fig12 are mechanism schematics.
